Overview

RedZone Robotics advanced pipeline assessment is the manufacturer and service provider for acquiring sewer collection pipeline data. As a leader and innovator, RedZone Robotics pioneered inspection and data collection for sewer collection systems with autonomous robots, Multi-Sensor inspection capabilities for large diameter pipelines utilizing Digital CCTV, Sonar, laser and lidar profiling, H2S2 gas detection, and a decision support sewer asset management program. The industry demanded robotic platforms with highly advanced data to analyze aging infrastructure. All past and present collection system data can be placed on a sewer asset management program to create a centralized GIS centric database, enabling decision support to budget, plan, and provide work order management. Clients have more cost-efficient and effective capital improvement projects, tightly integrated inspection viewing, and improved prioritization of repairs and maintenance.
