Subject: Sole Source Affidavit

RADeCO, Inc is a certified technical partner, reseller and trainer of Boston Dynamics. RADeCO offers a unique public safety kit that differs from others. Being a technical partner of Boston Dynamics we increase the value of the payloads on the robot. We call this CERBERUS Kit.

Cerberus in question 2 is our model kit not a different company. The CERBERUS kit utilizes proprietary mounts, marston plates, bot locks, quick release locks for the desired payloads. The specialized mounts give the operator better operating range of the robot. The mounts mount the radios on the back of the robot giving it further range as you can turn up the wattage on the radio and not get any RF interference with the robot. This set up gives you 1500 Kilometers of range beyond line of sight. This is needed for SWAT, EOD and CBRN operations that your team will be using the robot for. Radio communications are the most important part of using robots and being a technical partner with Boston Dynamics allows us to make our own specialized kits.

Also, the mounts enable quick change outs of the payloads from tactical, to EOD or CBRN without using any tools.

RADeCO has sold over 100 robots to Police, Fire, DHS, USAF, and Secret Service using our CERBERUS kit.

For questions 3 I would check it as a secret process as we only advertise this to the customers directly when we perform demos and build out a customer set up. When we first speak to customers, we ask them what they want to accomplish using the robot an then RADeCO builds out the CERBERUS kit solution based on the customers needs.

The robot is the robot, but the robot is only as good as the payloads that are on it. We enhance the capabilities of the payloads and operations for the end user.

If you have any questions, please let me know.

Best regards,

Brad Lovendale Vice president
